

INSTRUCTIONS FOR USE

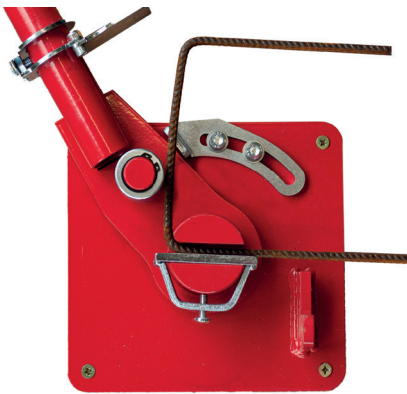

BENDERS OF BARS, STIRRUPS, WIRES

Item number: 26730

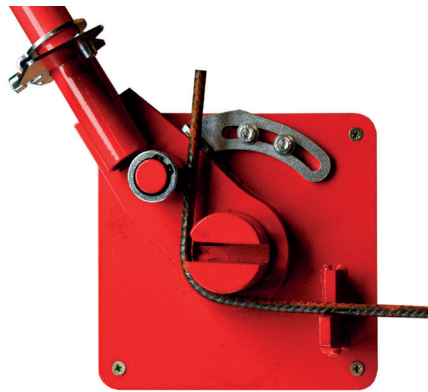

Please read this manual carefully before use.

Step 1:

Attach the bender to the table top, you can also use a pallet, etc. The bender has holes in the base that are used for this purpose.

Step 2:

- Bending in the groove (pic. 1.)

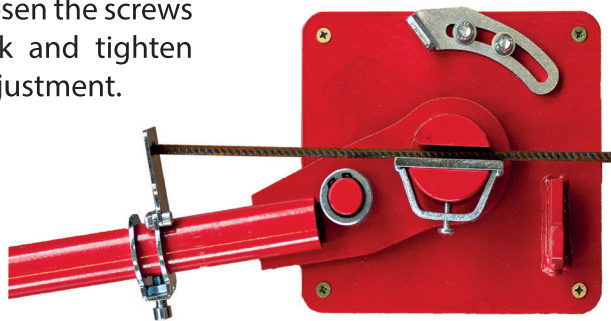

Depending on the diameter of the wire/bar to be bent, consider the use of an insert in the cylinder (Always tighten the insert locking screw carefully!).

- Bending on a cylinder (pic.2.)

For a larger bend radius, bend the wire / rod directly on the cylinder. (Always remove the insert before bending on the cylinder!)

Step 3:

Adjust the stop for the desired bending angle. Loosen the screws to release the lock and tighten them back after adjustment.

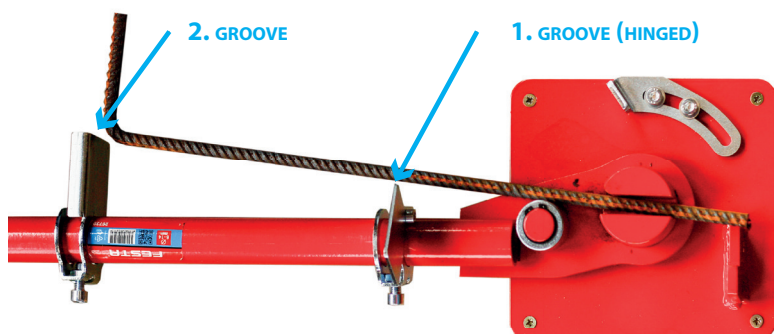

Step 4:

- Adjusting the handle stops

Square shape: Just use one stop.

Rectangular shape: Use of both stops. When bending the longer side, the first stop is raised. (pic. 5.)
