

## **INSTRUCTION MANUAL FOR 38021 - Caulking gun for mounting spume**

1. Before use shake the box of PU foam
2. Remove the cover and screw the box on the adapter of the gun
3. By pressing apply the foam
4. Set the quantity of applying foam with the regulation screw

When stocking the gun for the short-term period (till 48 hours)- store the gun together with the screwed box of foam.

When stocking it for a longer period, screw off the box of the foam and clean the gun. Remove the foam by using a cleaner for PU foams (types e.g. Den Braven – Zwaluw –foam cleaner, Souldal - Gun&Foam cleaner), the curing foam is only possible to remove mechanically. Clean the valve with the vaseline.

### **Cleaning the gun:**

1. It is necessary to clean the gun after everyday use.  
(we can leave the box in the gun only in case that it is at least full from 1/3. It does not pay if we will not work with the gun for a few days, in such a case remove the box and keep in vertical location upside down.
2. Screw the box with cleaner on the gun.
3. By short pressing the trigger fill in the gun with the cleaner and wait for about 5minutes.
4. Then press the trigger for such a time till clean liquid flows from the gun.
5. Screw off the box with cleaner.

When changing the box, screw off the empty box and screw on a new one quickly, so that there is not air inside.

For applying PU foam in narrow places, use the applied adapter.

### **Changing the box of PU foam:**

1. Find out if the box is empty
2. Shake the new foam properly
3. Screw off the empty box and immediately screw on the new one, so that the rest foam in the gun cannot stiffen.
4. By short press of trigger fulfill the gun with new foam.

### **Caution:**

The box of foam is under the pressure.

Do not leave in the sun and in the temperatures over 50°.

Do not spray PU foam on the flaming subjects and into open fire.

Do not break the boxes and do not throw them in fire (neither empty).

Complaints are not considered for UNCLEAENED guns.
